The present sequence is a primate interleukin-1 like molecule, designated II-1-zeta. An alternative sequence, encoded by an allelic variant is given in AAY91885. The 12 beta strands, indicated in the features table, fold into a beta-trefoil fold. The specification claims an isolated or recombinant polypeptide that: (a) specifically binds polyplonal antibodies generated against at least a 12 consecutive amino acid segment of IL-1-zeta (see AAY91884) or its allalic variant (see AAY91885); and of IL-1-zeta (see AAY91884) or its allalic variant (see AAY91885); and form AAY91904-06. The preferred 12 consecutive amino acid segment is chosen from AAY91907-18 or AAY91912-12. IL-1-zeta is likely to play a role in systemic inflammatory reactions, such as fever, hypoglycemia, reduced plasma copper. IL-1-zeta binding compounds (comprising antigen binding sheeps and IL-1-zeta polypeptides are also useful for both diagnostic and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated or recombinant nucleic acid encoding interleukin-1zeta polypeptide. The invention is useful in gene therapy. The composition and methods are useful in diagnosing or treating degenerative or abnormal conditions which directly or indirectly involve development, differentiation or function, e.g. of the immune system and/or haematopoietic cells. The invention may also be used for preventing or treating other diseases or disorders associated with abnormal expression or triggering of response to the interleukin, such as inflammatory disorders, infection, allergies or cancer. The present sequence is human interleukin-1zeta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

The invention describes an isolated or recombinant interleukin 1 zeta polypeptide (I) that specifically binds to polyclonal antibodies consecutive amino acid segment of two generated against at least a 12 consecutive amino acids segment of two fully defined sequences (S1) and (S2) having 218 amino acids as given in the specification and comprises at least one sequence chosen from (S1) and (S2). Also described are: a fuelon protein comprising (I) or its sequence or sequence of another cytokine or chemokine; a binding compound (II) an antigen binding site from an antibody, which specifically binds (II) an antigen binding site from an antibody, which specifically binds (II) an antigen binding site from an antibody which specifically binds (II), (I) or (II) and a carrier such as an aqueous compound e.g., water, call in copical or parental administration; an isolated for oral, rectal, can and or buffer, where the carrier is formulated for oral, rectal, consal, topical or parental administration; an isolated or recombinant (C) or (S2); a cell (IV) transformed with (III); a method of modulating a cell (IV) transformed with (III); a method of modulating a cell involved in an inflammatory response, by contacting the cell with an oral producing an antibody as mentioned for unserving a compartment of (II), (II) or an antigen: antibody complex. (I) is useful for developing more effective anti-inflammatory complexed or useful for developing more effective anti-inflammatory in the representation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SIHDQDHKVLVLDSGNLIAVPDKNYIRPEIFFALASSLSSASAEKGSLILLGVSKGEFCL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         YCDKDKGQSHPSLQLKKEKLMKLAAQKESARRPFIFYRAQVGSRNMLESAAHPGWFICTS 180
                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to interleukin-1 zeta polypeptide and polymucleotide. The agonist or antagonist of the interleukin-1 zeta is belymucleotide. The agonist or antagonist of the interleukin-1 zeta is useful in modulating a cell that is involved in inflammatory response. The peptide fragments of IL-1 zeta are useful in research and diagnostic tools in the study of inflammatory reactions to antigenic challenge and the development of more effective anti-inflammatory therapeutics. Interleukin-1 zeta is useful in regulation and/or development of immune system. A polymucleotide encoding IL-1 zeta is useful for detecting the expression level of the polypeptide in a patient suspected of having an immunological disorder. The present sequence is human interleukin-1 zeta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

The present sequence is the human interleukin (IL)-1 homolog zilla4 protein. This protein contains a core structure of 12 betea strands wound into a beta-barrel, with the beta-strands seperated from each other by loops. The loops between these beta-strands are highly variable among the family members and are believed to be involved in receptor binding. The zilla4 proteins modulate inflammation and other immunological processes and are therefore useful for treatment of arthritis, psoriasis, septic shock, graft-versus-host disease and leukaemia. Other diseases that may be modulated by zilla4 proteins include cancer, anaemia, inflammatory bowel disease, acute and chronic neuropathologies, shock, respiratory disease syndrome, restenosis and acquired immune deficiency syndrome
                                                                                       Immunomodulatory interleukin-1 homolog zilla4 proteins, useful for
treatment of e.g. arthritis, psoriasis, septic shock, graft-versus-host
disease, leukemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                 polypeptide (IL-IIp) that metains one or more activities of the peptide from which it is derived, such as the IL-IRR binding activity of a human interleukin-1 receptor antagonist-1 (IL-IRB) binding activity of a human uncleic acids may be used in molecular engineering applications, e.g. hybridization assays and chromosome and gene mapping studies, for recombinantly producing the IL-Ilp polypeptide or for producing gene knock out animals to study the IL-Ilp polypeptide or for producing gene knock out animals to study the role of the protein in metabolism and disease processes (conversely, gene therapy protecols may be used to supplement a patients production of the polypeptide or to rectify mutations that lead to the production of in active peptides). The peptides produced may be used to screen for and produce modulators (e.g. antibodies) of IL-Ilp protein expression and activity which may be use to treat disenders associated with inappropriate IL-Ilp expression and activity, such as inflammatory disorders, asthma, arthritis, sepsis, acute lung injury, adult respiratory distress syndrome, idiopathic pulmonary fibrosis, ischemic reperfusion disease, psoriasis, graft versus host disease and/or inflammatory bowel disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention provides an isolated interleukin-1 homologue, IL-1H4 polypeptide can be expressed by standard complypeptide. The IL-1H4 polypeptide, polymocleotides and modulators are useful for treating chronic and acute inflammation, septicemia, autoimmune diseases (e.g., inflammatory bowel disease, psoriasis and arthritis), transplant rejection, graft versus host disease, infection, stroke, ischemia, acute respiratory disease synforme, allergies, asthma, restenois, brain injury, AIDS, bone diseases (e.g., osteoporosis), cancer (e.g., lymphoproliferative disorders), congestive heart failure, antherosclerosis and Alzheimer's disease. The IL-1H4 polymucleotides are useful as diagnostic reagents and for chromosome identification. The present sequence represents the IL-1H4 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel polynuclectide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.
                                                                                                                                      Wood WI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                YCDKDKGQSHPSLQLKKEKLMKLAAQKESARRPFIFYRAQVGSRNMLESAAHPGWFICTS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                        The present sequence is a variant of human interleukin (IL)-1 homolog zilla4 protein, consisting of Asp in place of Glu at position 200. The replacement of Glu (200) with Asp results in attenuation of pro-inflammatory activity of zilla4 protein. The zilla4 proteins modulate inflammation and other immunological processes and are therefore useful for treatment of arthritis, psoriasis, septic shock, graft-versus-host disease and leukaemia. Other diseases that may be modulated by zilla4 proteins include cancer, anaemia, inflammatory bowel disease, acute and chronic neuropathologies, shock, respiratory disease syndrome, restenosis and acquired immune deficiency syndrome. Note: The present sequence is not shown in the specification but is derived from human zilla4 protein sequence shown in figure-2 (AAY70927)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SIHDQDHKVLVLDSGNLIAVPDKNYIRPEIFFALASSLSSASAEKGSLILLGVSKGEFCL 120

New interleukin-1 homolog Zilla4 protein, useful for modulating an immune response and for treating diseases, e.g., inflammatory diseases, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of human interleukin-1 (IL-1) homologues designated zilla4, and the polynucleotide sequences that encode them. The gene encoding human zilla4 is located on chromosome 2. Also disclosed is a method of making these proteins and a method of modulating an immune response. The proteins are useful for treating diseases such as inflammatory diseases, cancer, and anaemia. The present sequence represents human zilla4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   YCDKDKGQSHPSLQLKKEKLMKLAAQKESARRPFIFYRAQVGSWNMLQSAAHPGWFICTS 180

The present invention relates to the isolation of human interleukin-1 (II homologues designated zilla4, and the polynucleotide sequences that encode them. The gene encoding human zilla4 is located on chromosome 2. Also disclosed is a method of making these proteins and a method of modulating an immune response. The proteins are useful for treating diseases such as inflammatory diseases, cancer, and anaemia. The present sequence represents a variant human zilla4 protein.
                                                                                                                                                                                                                                                                                                                                                                                                            New interleukin-1 homolog Zilla4 protein, useful for modulating an immur
response and for treating diseases, e.g., inflammatory diseases, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 SIHDQDHKVLVLDSGNLIAVPDKNYIRPEIFFALASSLSSASAEKGSLILLGVSKGEFCL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; interleukin-1 homologue; IL-1; zilla4; immune response;
inflammatory disease; cancer; anaemia; immunomodulator; antiinflammatory;
cytostatic; antianaemic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SIHDQDHKVLVLDSGNLIAVPDKNYIRPEIFFALASSLSSASAEKGSPILLGVSKGEFCL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a variant of human interleukin (IL)-1 homolog zilla4 protein designated zilla4-B200K. The replacement of Glu (200) with Usy regults in change in activity from agonist to antagonist. The zilla4 proteins modulate inflammation and other immunological processes at therefore useful for creatment of arthritis, psoriasis, septic shock, graft-versus-host disease and leukaemia. Other diseases that may be modulated by zilla4 proteins include cancer, anaemia, inflammatory bowel disease, acute and chronic neuropathologies, shock, respiratory disease syndrome, restenosis and acquired immune deficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                              Immunomodulatory interleukin-1 homolog zilla4 proteins, useful for
treatment of e.g. arthritis, psoriasis, septic shock, graft-versus-host
disease, leukemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MSFVGENSGVKMGSEDWEKDEPQCCLEDPAGSPLEPGPSLPTWNFVHTSPKVKNLNPKKF

 The present sequence is that of splice variant TDZ.1 (testis-derived zeta variant) of human interleukin-1 zeta (IL-1 zeta). TDZ.1 mRNA is generated from exons 1, 2, 4, 5 and 6 of the IL-1 zeta locus, and the encoded protein is probably a functional IL-1 like molecule. TDZ.1 mRNA is expressed most strongly in the kidney, skeletal muscle, testis, prostate, covary, colon, small intestine, liver, placenta, lung, tonsil, foetal liver, lymph node and bone marrow. The invention is directed to novel, culfied and isolated IL-1 zeta, its splice variants and Xrec2 purified and isolated IL-1 zeta, its splice variants and Xrec2 colypeptides (see AAY95297-301), the nucleic acids (see AAA27918-22) colypeptides (see AAY95297-301), the nucleic acids (see AAA27918-22) colypeptides, and their uses. The polypeptides can be used to study cellular processes such as immune regulation, cell proliferation, cell migration, cell-to-cell interaction and inflammatory responses, to identify proteins associated with IL-1 zeta, to screen for potential inhibitors, and to prepare antibodies. In particular, they can be used to activate and/or inhibit the activation of vascular endothelial cells to produce IL-6, induce and/or inhibit the induction of local induction of prostaglandins, nitric oxide synthetase, and vor inhibit the upregulation of metalloproteases, and upregulate and/or inhibit the upregulation of metalloproteases, and upregulat endothelial cells cometalloproteases, and upregulat endothelial cells cometalloproteases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180
                                                                                                                                                                                                                                                                                                                                   TDZ1, TDZ2, TDZ3 and their encoding proteins, useful as probes for identifying genes associated with diseases such as glaucoma, and insulindependent diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SIHDQDHKVLVLDSGNLIAVPDKNYIRPEIFFALASSLSSASAEKGSLILLGVSKGEFCL 120

The present sequence is an alternative primate interleukin-1 like molecule, designated IL-1zeta. The 12 beta strands, indicated in the features table, fold into a beta-trefoil fold. The specification claims an isolated or recombinant polypeptide that: (a) specifically binds polyclonal antibodies generated against at least a 12 consecutive amino acid segment of IL-1zeta (see AAY91884) or its allelic variant (see AAY91885); and (b) comprises at least one sequence selected from: AAY91885) and (b) comprises at least one sequence selected from segment is chosen from AAY91907-18 or AAY91919-21. IL-1zeta is likely t

play a role in systemic inflammatory reactions, such as fever, hypoglycemia, reduced plasma iron and zinc, the acute response of the liver, and increase plasma copper. IL-1-zeta binding compounds (comprising antigen binding sites) and IL-1-zeta polypeptides are also useful for both diagnostic and therapeutic purposes

A; Experimental source: alveelar macrophage
C; Comment: This protein is a pleiotropic cytokine that mediates a variety of processes 1
C; Comment: This protein lacks a conventional signal sequence for protein export. Cleavag
ved form of interleukin-lbeta, unlike interleukin 1-alpha, is inactive.
C; Comment: Interleukin-lbeta precursor is less heavily myristoylated than interleukin-1a

Cleavag ved form of interleukin-lbeta, unlike interleukin 1-alpha, is inactive. C; Comment: Interleukin-lbeta precursor is less heavily myristoylated than interleukin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lackin-lack
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Cross-references: UNIPROT:P10749; GB:M15131; NID:9198293; PIDN:AAA39276.1; PID:9309398 R;Telford, J.L.; Macchia, G.; Massone, A.; Carinci, V.; Palla, E.; Melli, M. C;Comment: This protein lacks a conventional signal sequence for protein export. Cleavag ved form of interleukin-lbeta, unlike interleukin 1-alpha, is inactive.
C;Comment: Interleukin-lbeta precursor is less heavily myristoylated than interleukin-la

Isoforms D and E were found only in testis and bone marrow. Whereas only isoform A is found in brain, only isoform B in kidney and only isoform C in heart. INDUCTION: By phorbol ester (PMA) in different cell lines. SIMILARITY: Belongs to the IL-1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            and mouse cDNA sequences.";
Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: Binds to interleukin-18 receptor (IL-18R) receptor but not to IL-1 receptor. Could be a new player in the inflammatory and immune responses mediated by the IL-18/IL-18R axis.
-!- SUBCELULAR LOCATION: Secreted.
-!- ALTERNATIVE PRODUCTS:

receptor-related protein 2-mediated response to interleukin 1
family member 9 (ILIF9). Could constitute part of an independent
signaling system analogous to interleukin-1 alpha (IL-1A), beta
(IL-1B) receptor agonist and interleukin-1 receptor type I (IL-
IRI), that is present in epithelial barriers and takes part in
local inflammatory response (By similarity).
--- SUBCELLULAR LOCATION: Secreted (By similarity).
--- TISSUE SPECIFICITY: Highly abundant in embryonic tissue and
tissues containing epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          15.8%; Score 182.5; DB 1; Length 156; 34.5%; Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 2,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
